Surname: MMELA

STUDENT NUMBER: ST10503069

MODULE NAME: WEB DEVELOPMENT

MODULE CODE: WED5020

DATE: 14 AUGUST 2026

Website Project Proposal.

MedLeaf Coffee Shop.

1. Organisation Overview

Name: MedLeaf Coffee Shop

Brief History:

MedLeaf Coffee Shop was founded in 2023 in Roodepoort, Gauteng. It started as a small community café with the goal of providing high-quality coffee and food in a warm and welcoming environment. Over time, it has grown into a popular destination for students, freelancers, and families looking for a comfortable place to relax, work, or meet friends.

Mission Statement:

To provide ethically sourced, high-quality coffee and food while creating a mindful, sustainable, and welcoming community space.

Vision Statement:

To become Roodepoort's favourite neighbourhood café, recognised for excellent coffee, natural ingredients, and strong community connections.

Target Audience:

The primary target audience includes university students, remote workers, and local residents aged 18–40 in the Roodepoort area. These customers value quality products, free Wi-Fi, and a comfortable environment for studying, working, and socialising.

2. Website Goals and Objectives

The main goals of the MedLeaf website are to:

- Increase brand awareness and attract new customers in the Roodepoort area.
- Provide clear information about the café's menu, location, operating hours, and services.
- Showcase the café's atmosphere, products, and community values.

Key Performance Indicators (KPIs):

The success of the website will be measured through:

- Number of website visitors per month.
- Number of customer enquiries through phone or email.
- Increased customer visits to the physical store.

3. Current Website Analysis

MedLeaf Coffee Shop is a new business and currently does not have an existing website. This provides an opportunity to develop a modern, mobile-friendly website from the ground up without needing to correct previous design or usability issues.

The new website will establish an online presence and make information about the café easily accessible to customers.

4. Proposed Website Features and Functionality

The website will consist of five main pages developed using HTML5:

1. Home Page

- Welcome message.
- Brief introduction to MedLeaf Coffee Shop.
- Opening hours.
- Website navigation.

2. About Page

- Company background.
- Mission and vision statements.
- Information about the café's values.

3. Menu Page

- Categorised list of products including coffee, tea, pastries, and light meals.

- Product descriptions and pricing information.

4. Gallery Page

- Images showcasing the café environment, products, and customer experience.

5. Contact Page

- Café address.
- Phone number.
- Email address.
- Opening hours.
- Social media links.

All pages will include a consistent header, navigation bar, and footer to improve usability and maintain a professional design.

5. Design and User Experience

Colour Scheme:

The website will use an earthy colour scheme:

- Primary colours: Deep green and warm brown.
- Secondary colours: Cream and beige.

These colours represent nature, coffee, warmth, and the café environment.

Typography:

The website will use clean and readable sans-serif fonts. Headings will be bold to improve structure, while body text will remain simple and easy to read.

Layout and Design:

The website will have a simple, clean, and content-focused layout. The header will contain the logo and navigation menu. The main section will display page content, and the footer will contain copyright information.

User Experience:

The navigation system will be clear and consistent across all five pages. The website will be designed to be easy to use on both desktop and mobile devices.

Wireframes:

Low-fidelity wireframes will be created in Part 2 to demonstrate the planned layout before adding CSS styling.

6. Technical Requirements

For Part 1, the website will be developed using HTML5 only. CSS and JavaScript will not be implemented at this stage.

For future deployment in Part 2, the website will require basic web hosting and a domain name, for example:

www.medleaf.co.za

Technologies Used:

- HTML5 for website structure.
- CSS for styling and responsive design in the later development stage.

7. Timeline and Milestones

Week 1–2:

- Complete the website proposal document.
- Develop the five HTML pages.

Week 3–4:

- Add CSS styling.
- Improve website layout and responsive design.

Week 5:

- Add images to the gallery.
- Test all links and website functionality.

Week 6:

- Complete final testing.

- Submit the completed website.

8. Budget

As this is a student project, the estimated budget is minimal.

Development:

R0 – Developed by the student.

Domain Name:

Approximately R150 per year.

Web Hosting:

Approximately R600 per year.

Total Estimated Annual Cost:

Approximately R750 per year.
